Everyday

Ecommerce with an AI shopping assistant

Browse a mixed catalog. Ask for help. Build your bag.

"Add 2 ceramic coffee mugs to my cart"

The assistant checks the catalog and adds items to the signed-in user's own cart.

What the app includes

Search and price sorting
Login and saved carts
Unpaid checkout and order history
Policy answers with page references

How it works

Browser -> Node proxy -> FastAPI
SQLite for catalog, carts, orders
LangChain agent with cart tools
FAISS for policy retrieval

12 demo products loaded at startup | Chat requires login

Demo app: checkout creates an unpaid order. Payments and delivery are future work.
